

BETTER HEALTH STARTS AFTER THE *Last Cigarette*

I QUIT!

After the last cigarette, the road to better health starts within minutes and continues for years. Here are the changes your body experiences along that journey.

20 MINUTES

Blood pressure, pulse rate and body temperature all drop to normal levels

Carbon monoxide level in blood drops to normal

Oxygen level in blood increases to normal

8 HOURS

"Smoker's breath" disappears

24 HOURS

Chances of a heart attack decreases

Nerve endings start to regrow

Sense of smell and taste improve

48 HOURS

WITHIN 3 MONTHS

Circulation improves

Walking becomes easier

Lung capacity increases and lung function improves

Coughing, sinus congestion, tiredness and shortness of breath decrease

WITHIN 9 MONTHS

1 YEAR

Excess risk of coronary heart disease is decreased to half that of a smoker

From 5–15 years after quitting, stroke risk is reduced to that of people who never smoked

Risk of developing mouth, throat, esophageal cancer is half that of a smoker

5 YEARS

Risk of cancer drops to as little as one-half that of continuing smokers

Risk of ulcer decreases

Lung cancer death rate similar to nonsmoker

10 YEARS

Risk of coronary heart disease and death returns to nearly same level of people who never smoked

15 YEARS

Congratulations

FOR TAKING STEPS TO IMPROVE YOUR HEALTH!
